In architecture the capital (from the Latin caput, or "head") or chapter forms the topmost member of a column (or a pilaster). It mediates between the column and the load thrusting down upon it, broadening the area of the column's supporting surface. The capital, projecting on each side as it rises to support the abacus, joins the usually square abacus and the usually circular shaft of the column.

Capital (architecture) - Wikipedia

Capital Structure Decision • The overall capital structure of an MNC is essentially a combination of the capital structures of the parent body and its subsidiaries. • The capital structure decision involves the choice of debt versus equity financing, and is influenced by both corporate and country characteristics. 17. 20

Chapter

The weighted average cost of capital (WACC) is the rate that a company is expected to pay on average to all its security holders to finance its assets. The WACC is commonly referred to as the firm's cost of capital. Importantly, it is dictated by the external market and not by management. The WACC represents the minimum return that a company must earn on an existing asset base to satisfy its ...
